

# Mach V

## Disc Pole Hole™

**24 Welded  
& hot-dipped  
galvanized  
chains.**

**Deluxe Mach V™**

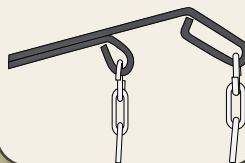

The Mach V™ is renowned for being the most advanced and innovative Disc Pole Hole™ available.

The Mach V™ comes with our patented sliding chain mechanism which slows the disc down, dropping the shot into the basket. The sliding link helps catch fast and powerful shots as well as slower finesse putts.

Further improving the Mach V's catching is our patented inner chains. The Mach V's staggered designed inner chains create three layers of chain. This design layout has the effect of decelerating a disc as it hits each successive row of chain. Our inner chain design also limits bounce back caused when a disc hits the center pipe.

Our Trapper™ basket comes standard on all of our Disc Pole Holes™. The Trapper™ design prevents discs from rolling up and out of the basket. Once a disc hits the basket it stays there.
